Questions

Discussion

Q.1

Pw

The height of a tree is the length of the longest root-to-leaf path in it. The maximum and minimum number of nodes in a binary tree of height 9 are-

- A.
- 1024,9

Mmex = 2 -1

- B.
- 1023, 10
- c. 511, 9
- D. 512, 10

$$= 2 - 1$$
 $= 2 - 1$
 $= 2 - 1$
 $= 2 - 1$
 $= 3 + 1$
 $= 1024 - 1$
 $= 1024 - 1$

A strict k-ary tree T is a tree that contains exactly 0 or k children. The number of leaf nodes in tree T if there are exactly 'p' internal nodes is-

A.
$$(k-1)p+1$$

K child of each internal node

None Total = PK+1 L+P=PK+1 L=PK-P+1 L=P(K-1)+1

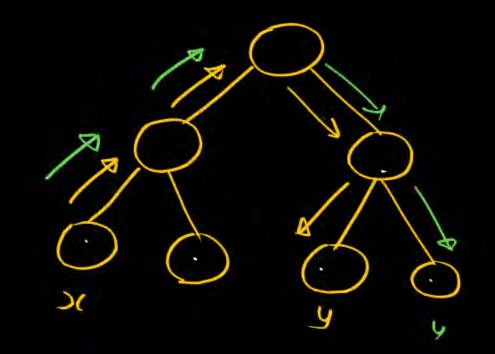

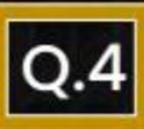

Matha

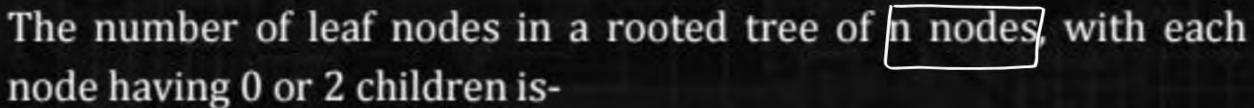

Let T be a full binary tree with 4 leaves. (A full binary tree has every level full). Suppose two leaves x and y of T are chosen uniformly and independently at random. The expected value of the distance between x and y in T (i.e., the number of edges in the unique path between x and y) is (rounded off to 2 decimal places) $\frac{2.5}{2.5}$.

Path lengths ways

Any two last node = 4x4=16 Path lengths ways 4/16 4/16 E(i) = SixP(i) 8 8/16

$$\frac{n+1}{2}$$

$$\frac{n-1}{2}$$

n-1

$$\frac{n}{2}$$

Internal node

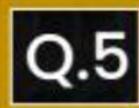

Internal node

$$I \rightarrow (m-L)$$

$$L \rightarrow (m-L)$$

$$R = 2 \times I + 1$$

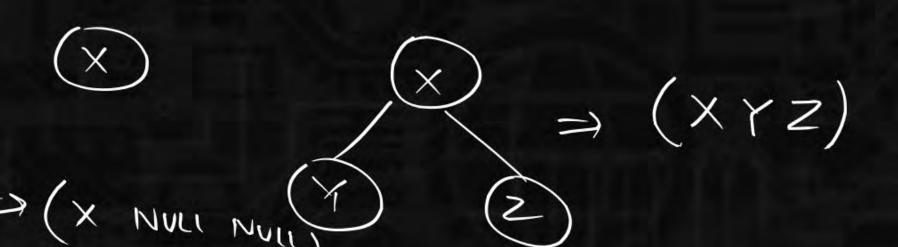

$$N = 2$$

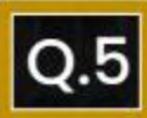

Consider the following nested representation of binary trees: (X Y Z) indicates Y and Z are the left and right sub stress, respectively, of node X. Note that Y and Z may be NULL, or further nested. Which of the following represents a valid binary tree?

- A. (12(4567))
- B. (1 (2 3 4) 5 6) 7)
- C. (1 (2 3 4) (5 6 7))
- D. (1 (2 3 NULL) (4 5))

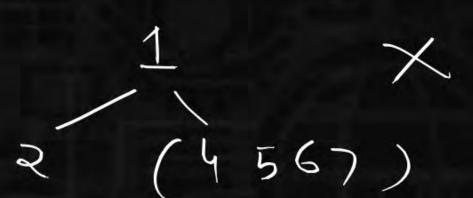

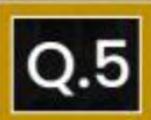

Consider the following nested representation of binary trees: (X Y Z) indicates Y and Z are the left and right sub stress, respectively, of node X. Note that Y and Z may be NULL, or further nested. Which of the following represents a valid binary tree?

- A. (12(4567))
- B. (1 (2 3 4) 5 6) 7)
- C. (1 (2 3 4) (5 6 7))
- D. (1 (2 3 NULL) (4 5))

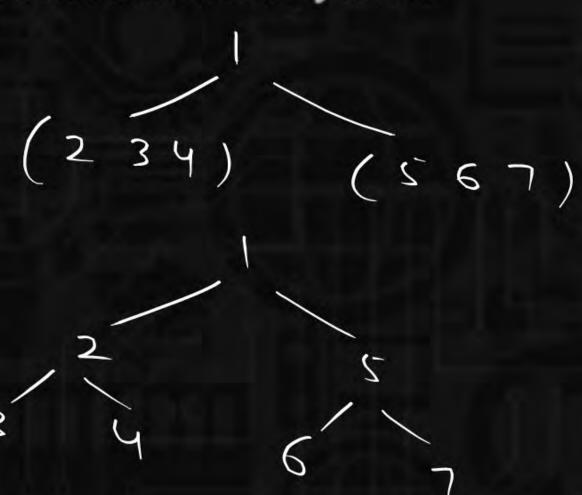

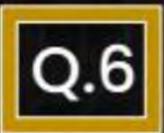

Consider the following nested representation of binary trees: (X Y Z) indicates Y and Z are the left and right sub stress, respectively, of node X. Note that Y and Z may be NULL, or further nested. Which of the following represents a valid binary tree?

- A. (12(4567))
- B. (1 (2 3 4) 5 6) 7)
- (1 (2 3 4) (5 6 7))
 - D. (1 (2 3 NULL) (4 5))

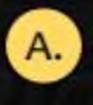

Consider the following two statements:

S1: It is possible to construct a binary tree uniquely whose postorder and pre-order traversals are given.

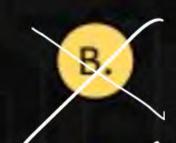

S2: It is possible to construct a binary tree uniquely whose in-order and pre-order traversals are given.

S3: It is possible to construct a binary tree uniquely whose postorder and level-order traversals are given.

Which of the following statement(s) IS/ARE INCORRECT?

S1 only

S2 only

S1 and S3

S3 only

10 10 20

Let LASTPOST, LASTIN and LASTPRE denote the last vertex visited in a postorder, inorder and preorder traversal respectively, of a complete binary tree. Which of the following is always true?

LASTIN = LASTPOST

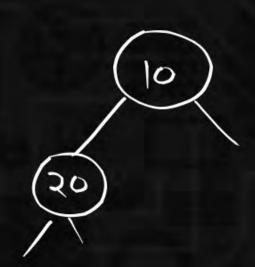

LASTIN = LASTPRE

LASTPRE = LASTPOST

None of the above

Post.	20	10	
In	20	10	
Pre .	10	20	

Let LASTPOST, LASTIN and LASTPRE denote the last vertex visited in a postorder, inorder and preorder traversal respectively, of a complete binary tree. Which of the following is always true?

LASTIN = LASTPOST

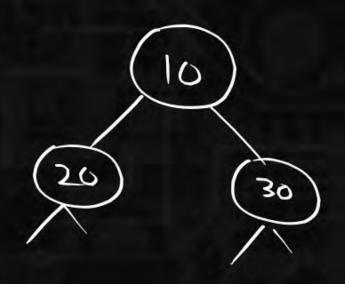

LASTIN = LASTPRE

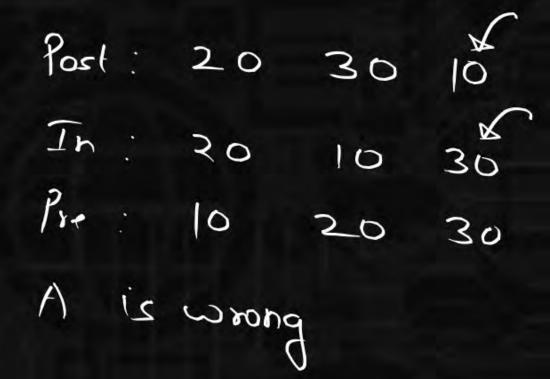

LASTPRE = LASTPOST

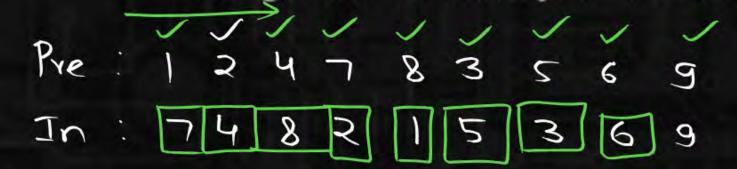

None of the above

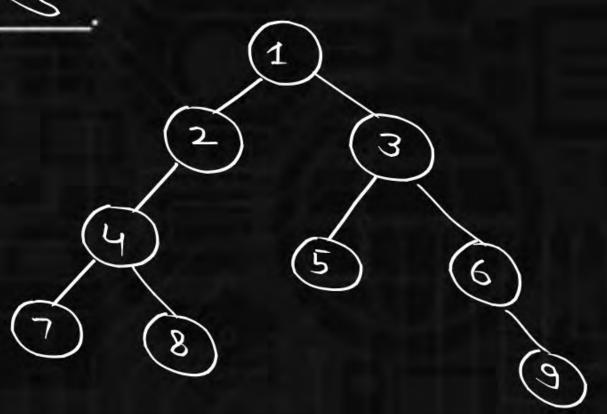

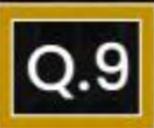

Q.8

The pre-order traversal of a binary tree is 1, 2, 4, 7, 8, 3, 5, 6, 9. The in-order traversal of the same tree is 7 4 8 2 1 5 3 6 9. The height of a tree is the length of the longest path from the root to any leaf. The height of the binary tree above is _____.

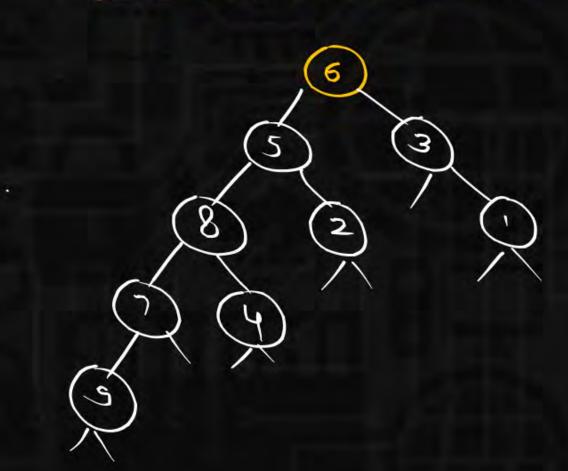

The post-order traversal of a binary tree is 9, 7, 4, 8, 2, 5, 1, 3, 6. The in-order traversal of the same tree is 9, 7, 8, 4, 5, 2, 6, 3, 1. The pre-order traversal of the above binary tree is-

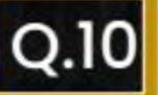

- A.
- 1, 2, 4, 7, 9, 8, 5, 3, 6
- Post: 974825136 In: 9784576311

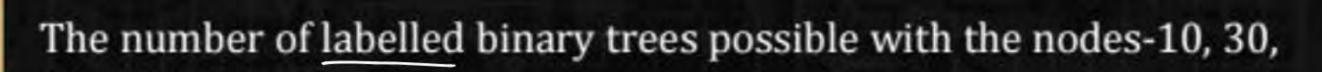

- B.
- 1, 2, 4, 7, 8, 9, 5, 3, 6
- **G**
- 1, 2, 3, 4, 5, 6, 7, 8, 9

None of the above

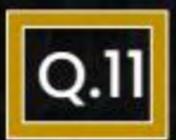

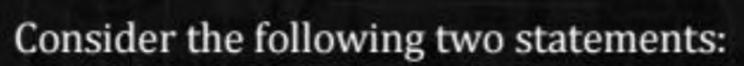

25, 40 is _____.

4 nodes ->
$$\frac{8c_4}{5}$$
 × 4! $\frac{2h}{n}$ nodes -> unlabelled -> $\frac{2h}{n+1}$

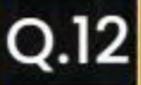

Statement P: The last elements in the pre-order and inorder traversal of a binary search tree are always same.

Statement Q: The last elements in the pre-order and inorder traversal of a binary tree are always same.

30

Which of the following tree is/are CORRECT?

- A. Both P and Q
- B. Neither P nor Q
- C. Q only
- D. Ponly

```
Consider the following function:
   struct treenode{
   struct treenode*left;
   int data;
   struct treenode *right;
   int func (struct treenode *t){
   if(t = NULL) return 1;
   else if(t\rightarrowleft = NULL && t\rightarrow right = NULL)
   return 1;
   else if
   ((t \rightarrow left \rightarrow data < t \rightarrow data) && (t \rightarrow right \rightarrow data > t \rightarrow data))
   >data))
   return func(t\rightarrowleft) && func(t\rightarrow right);
   else
   return 0;
```

Assume t contains the address of the root node of a tree.

The function-

Returns 1 if the given tree is a Binary Search Tree.

- B.
- Returns 0 if the given tree is a complete binary tree. X

Returns 0 if the given tree is a Binary Search Tree.

D. Returns 1 if the given tree is a complete binary tree.

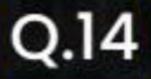

Consider the following function: struct treenode { struct treenode *left;

```
int data:
struct treenode *right;
struct treenode * f(struct treenode *t, int x)
   if(t=NULL) return NULL;
   elseif(x=t->data) return a;
   else if (x<t->data) return b;
   else return c;
```

Assume t contains the address of the root node of a binary search tree. The function finds an element x in the BST and returns the address of the node if found. Which of the following statement(s) is/are CORRECT?

- A. a: NULL; b: f(t->left, x); c: t->right, x)
- B. a: t; b: f(t->right, x); c: f(t->left, x)
- c. a: NULL; b: f(t->right, x); c: f(t->left, x)
- D. a: t; b: f(t->left, x); c: f(t->right, x)

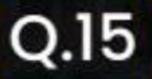

```
Consider the following function:
  struct treenode
     struct treenode *left;
     int data;
     struct treenode *right;
  int func(struct treenode *p)
     if(p==NULL) return 1;
     else if(p->right!=NULL) return 0;
     return func(p->left);
  Initially p contains the root node address of the tree, the
function-
```

- A. Returns 1 if a binary tree is left-skewed.
- B. Returns 1 if a binary tree is right-skewed.
- C. Returns 1 if a binary tree is not right-skewed.
- D. None of the above.

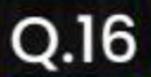

```
Consider the following function:
  struct treenode
                struct treenode *left;
                int data;
                struct treenode *right;
  int func(struct treenode *t)
                if(t==NULL) return 0;
  elseif(t->left==NULL && t->right==NULL) return 1;
                else
                return 1+func(t->left)+func(t->right);
```

Assume, t is a pointer to the root node of a binary tree, the function computes-

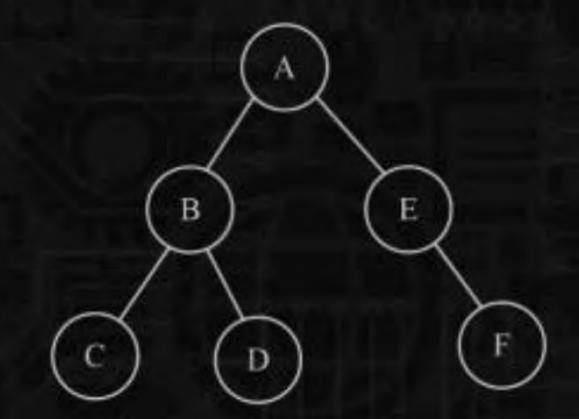

- A. Number of leaf nodes in the binary tree
- B. Number of internal nodes in the binary tree
- C. Total number of nodes in the binary tree
- D. None of the above

The given tree is passed to the following function:

```
void func(struct treenode *t)
 if(t)
   printf("%d", t->data);
func(t->right);
3 printf("%d", t->data);
  func(t->left);
The output string is-
```

A. AEFFEBDDCCBA

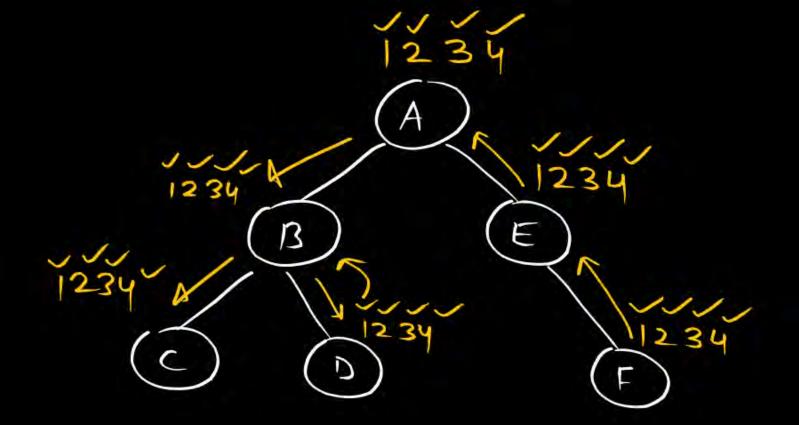

AEFFEABDDBCC

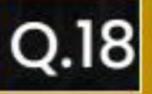

C. AEFFEBDDCCBA

None of the above

AEFFEABDDBCC

```
Consider the following function:
  struct treenode
               struct treenode *left;
                int data;
                struct treenode *right;
   };
  void func(struct treenode *p){
  while(p->left!=NULL) p=p->left;
  printf("%d", p->data);
If the address of the root node of the BST is passed to p, the above
function prints-
```

(Assume, the tree contains at least one node)

- A. The maximum element in the BST
- B. The ancestor of two leftmost leaf nodes
- C. The minimum element in BST
- D. None of the above

P: The minimum number of nodes in a complete binary tree is 2h+1.

Q: A binary search tree is always a complete binary tree. Incorrect Which of the statement(s) is/are CORRECT?

- A. P only
- B. Q only
- C. Both P and Q
- D. Neither P nor Q

Consider the following operations in a BST-

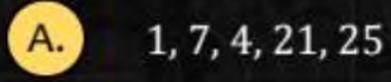

INSERT(23), INSERT(17), INSERT(25), INSERT(4), INSERT(21),

23

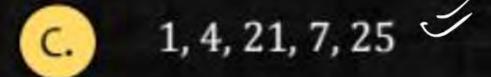

21

INSERT(1), INSERT(7), DELETE(17), DELETE(23).

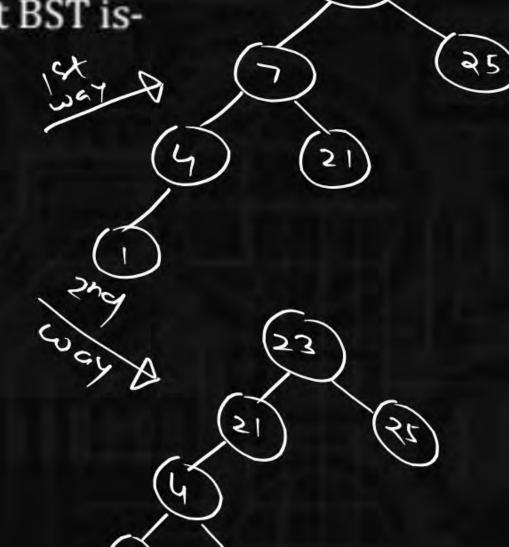

The post-order traversal of the resultant BST is-

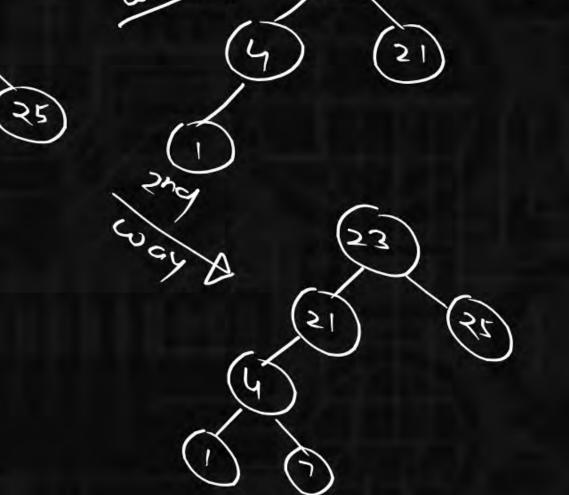

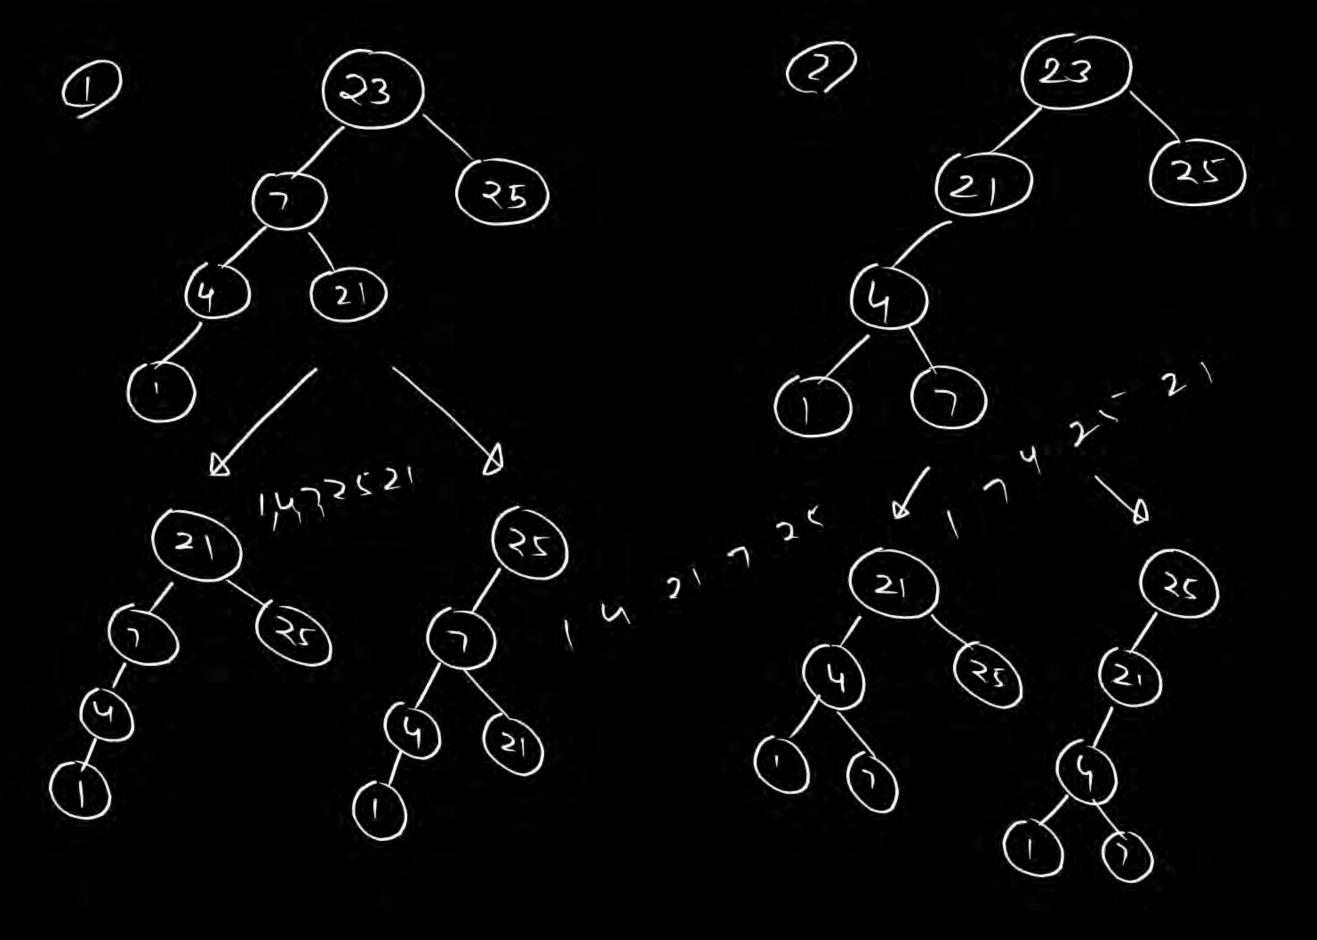

23

Q.20

P: The accepted balanced factor in an AVL tree are -1, 0 and +1.

Q: The height of an AVL tree with n nodes is given as log2n. O(log2n)

The number of INCORRECT statements is ______.

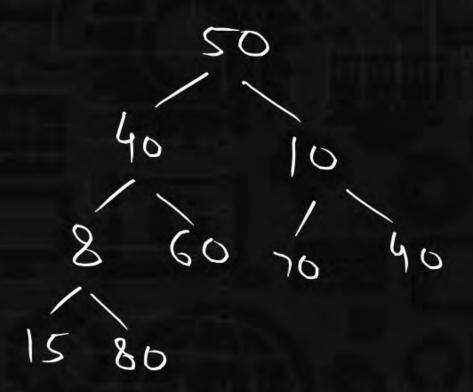

Q.21

Consider the array given below:

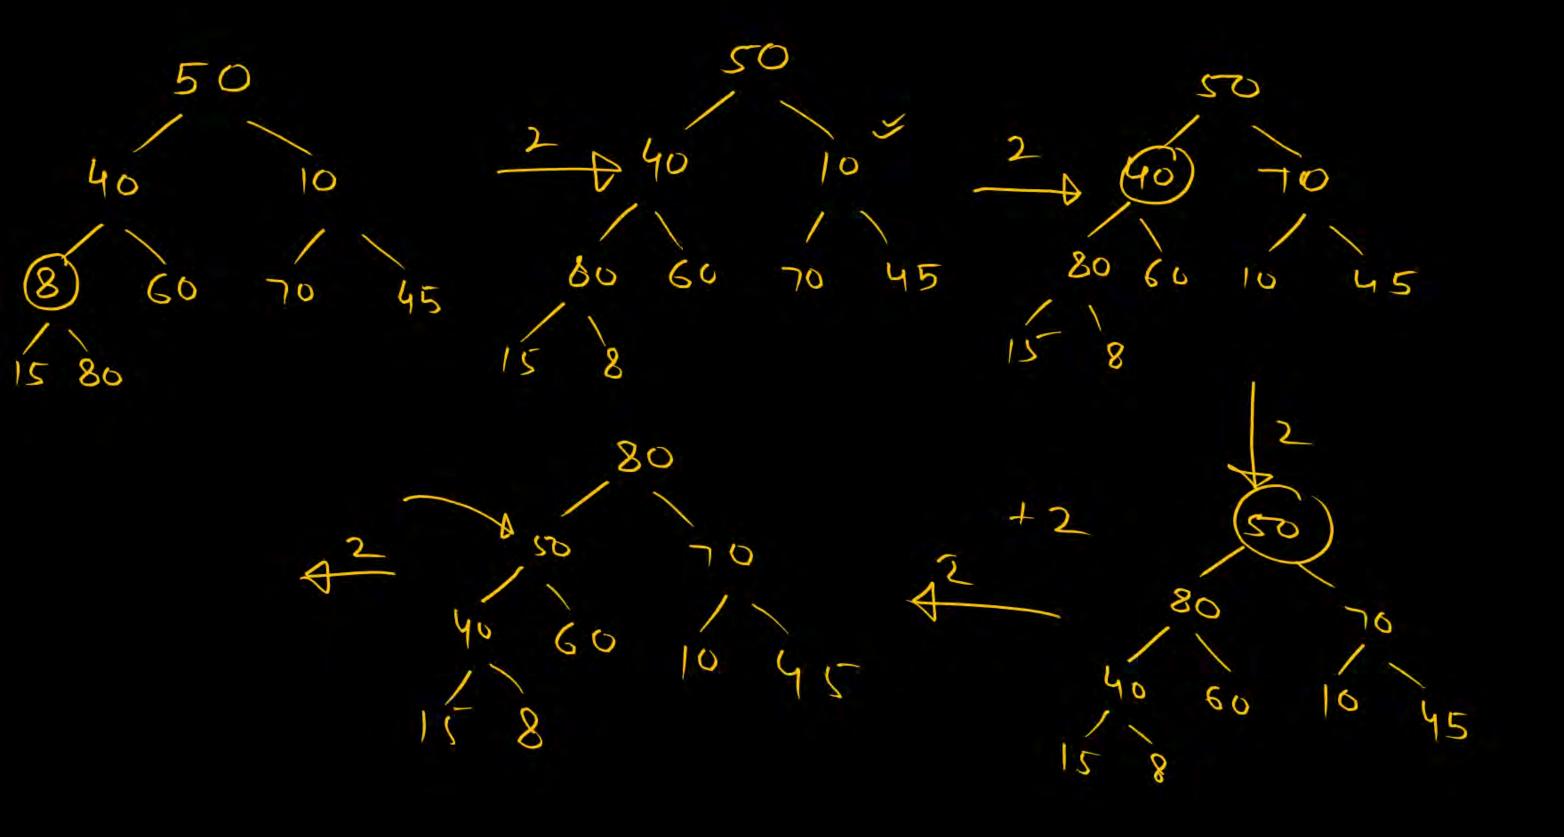

50	40	10	8	60	70	20	15	80

The minimum number of comparisons required to convert the above array into max heap is _____

Pw

Consider a sequence of elements are inserted into a max-heap one after another as-

50, 40, 10, 5, 60, 70, 40, 15, 80

The resultant max-heap using bottom-up approach of build heap is-

- A. 80, 60, 70, 40, 50, 10, 40, 15, 5
- B. 80, 70, 60, 50, 40, 10, 40, 5, 15
- C. 80, 70, 60, 50, 40, 40, 15, 10, 5
- D. None of the above

Same concett

Consider the following two statements:

P: The number of comparisons required to find the minimum element in a min heap of n elements is n-1.

Q: Only one comparison is required to find the minimum element in a max heap of n elements.

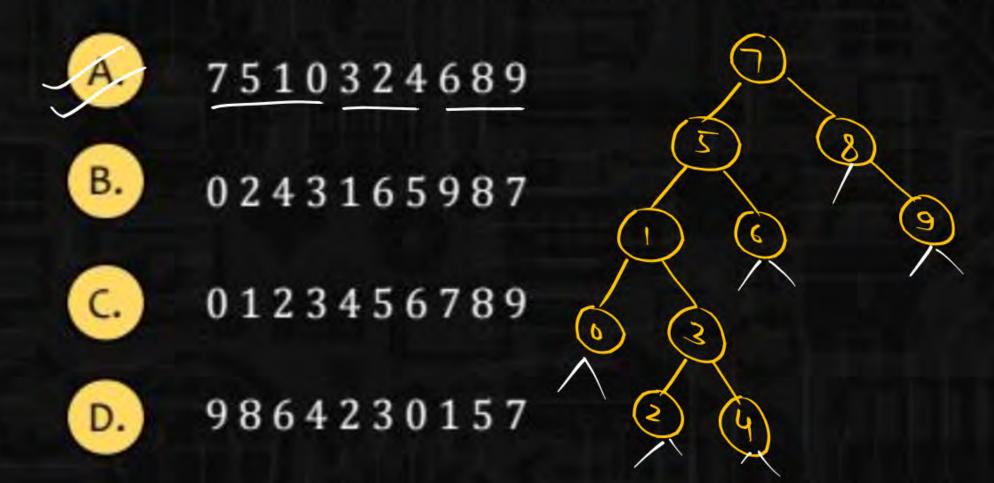

\[
\frac{1}{1}\text{O}(\text{CO}) \\
\frac{1}{2}\text{O}(\text{N})
\]

Which of the following is/are CORRECT?

- A. P only
- B. Q only
- C. Both P and Q
- D. Neither P nor Q

Suppose the numbers 7, 5, 1, 8, 3, 6, 0, 9, 4, 2 are inserted in that order into an initially empty binary search tree. The binary search tree uses the usual ordering on natural numbers. What is the preorder traversal sequence of the resultant tree?

A Binary Search Tree (BST) stores values in the range 37 to 573. Consider the following sequence of keys.

1.81, 537, 102, 439, 285, 376, 305

II.52, 97, 121, 195, 242, 381, 472

III.142, 248, 520, 386, 345, 270, 307

IV.550, 149, 507, 395, 463, 402, 270

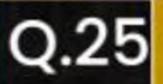

Suppose the BST has been unsuccessfully searched for key 273. Which all of the above sequences list nodes in the order in which we could have encountered the min the search?

A. I and III

B. II and III

C. III and IV

D. III only

A Binary Search Tree (BST) stores values in the range 37 to 573. (81)

Consider the following sequence of keys.

I.81, 537, 102, 439, 285, 376, 305 X

II.52, 97, 121, 195, 242, 381, 472

III.142, 248, 520, 386, 345, 270, 307

IV.550, 149, 507, 395, 463, 402, 270

Suppose the BST has been unsuccessfully searched for key 273. Which all of the above sequences list nodes in the order in which we could have encountered the min the search?

II and III

III and IV

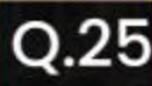

III only

537

439)

102

A Binary Search Tree (BST) stores values in the range 37 to 573. 97

Consider the following sequence of keys.

I.81, 537, 102, 439, 285, 376, 305

II.52, 97, 121, 195, 242, 381, 472 X

III.142, 248, 520, 386, 345, 270, 307

IV.550, 149, 507, 395, 463, 402, 270

Suppose the BST has been unsuccessfully searched for key 273.

Which all of the above sequences list nodes in the order in which we

could have encountered the min the search?

I and III

II and III

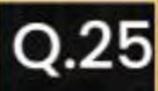

III and IV

III only

(381)

121

A Binary Search Tree (BST) stores values in the range 37 to 573.

Consider the following sequence of keys.

I.81, 537, 102, 439, 285, 376, 305

II.52, 97, 121, 195, 242, 381, 472

III.142, 248, 520, 386, 345, 270, 307

IV.550, 149, 507, 395, 463, 402, 270

Suppose the BST has been unsuccessfully searched for key 273. Which all of the above sequences list nodes in the order in which we

could have encountered the min the search?

B. II and III

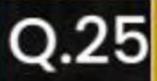

C. III and IV

D. III only

520

386

A Binary Search Tree (BST) stores values in the range 37 to 573.

Consider the following sequence of keys.

I.81, 537, 102, 439, 285, 376, 305

II.52, 97, 121, 195, 242, 381, 472

III.142, 248, 520, 386, 345, 270, 307

XIV.550, 149, 507, 395, 463, 402, 270

Suppose the BST has been unsuccessfully searched for key 273. Which all of the above sequences list nodes in the order in which we could have encountered the min the search?

A. I and III

B. II and III

C. III and IV

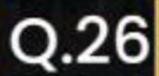

550

507

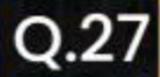

395

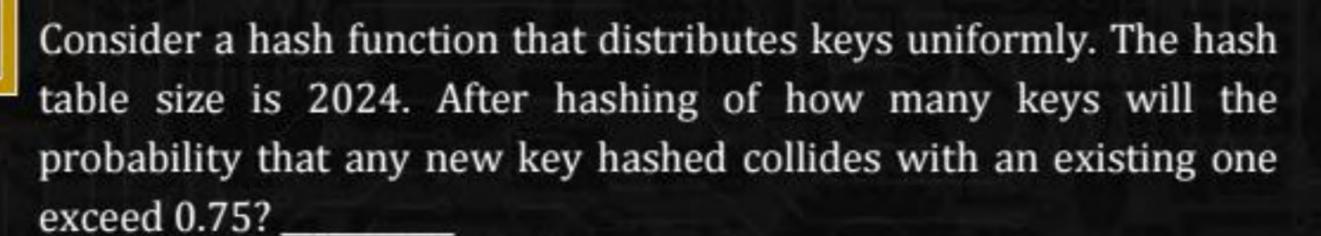

A Priority-Queue is implemented as a Max-Heap. Initially, it has 5 elements. The level-order traversal of the heap is given below: 10, 8, 5, 3, 2. Two new elements '1' and '7' are inserted in the heap in that order. The level-order traversal of the heap after the insertion of the elements is:

- A. 10, 8, 7, 3, 2, 1, 5
- B. 10, 8, 7, 2, 3, 1, 5
- C. 10, 8, 7, 3, 2, 5, 1
- D. None of the above

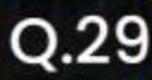

Suppose we are given n keys, m hash table slots, and two simple uniform hash functions h_1 and h_2 . Further suppose our hashing schemes uses h_1 for the even keys and h_2 for the odd keys. What is the expected number of keys in a slot?

A. $\frac{n}{m}$

B. $\frac{m}{n}$

 $\frac{2n}{m}$

 $\frac{m}{2n}$

Consider a hash table with 11 slots. The hash function is $h(k) = k \mod 11$. The collisions are resolved by chaining. The following 11 keys are inserted in the order: 28, 19, 15, 20, 33, 30, 42, 63, 60, 32, 43. The maximum, minimum, and average chain lengths in the hash table, respectively, are-

- A.
- 3, 0, 1
- В.
- 3, 3, 3
- C.
- 3, 0, 2
- D.
- 4, 0, 1

A hash table of length 8 uses open addressing with hash function $h(k)=2+k \mod 8$, and linear probing. After inserting 5 values into an empty hash table, the table is as shown below.

0	-
100	
2	64
3	41
4	57
5	72
1 2 3 4 5 7	
7	29

How many different insertion sequences of the key values using the same hash function and linear probing will result in the hash table shown above?
